At the heart of your home

Gas Fires 2021

BRITISH MANUFACTURING

At the heart of your home

Welcome to Flavel

BFM Europe
BRITISH FIRE MANUFACTURERS

Today BFM Europe is the fastest growing domestic fire producer in the country with an unequalled reputation for quality and service. Every Flavel branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

Every model* carries the peace of mind of a 7 year guarantee and the reassurance of the Flavel Airwatch System on all living flame effect fires. This device immediately cuts off the gas supply in the unlikely event of the flame being extinguished through blockage.

Our 7 year guarantee is subject to terms & conditions including annual services carried out by a Gas Safe Register engineer and annual replacement of the oxy-pilot assembly (or thermocouple on balanced flue models).

At Flavel we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of affordable gas fires to complement all tastes and lifestyles. I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result all Flavel gas fires carry a 7 year guarantee to reflect my belief in their quality and durability.

This brochure has been designed to make the purchase of your new Flavel gas fire as simple as possible. I hope you will find it both informative and inspiring.

Richard Jones

**Ecodesign
Compliant**

Ecodesign Compliance

This logo signifies that the product is fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI) to meet the latest standards for performance, safety and efficiency.

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are recognised internationally for their technical expertise, quality services and in-depth knowledge of gas and electrical testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

high efficiency

Get up to 93.5% energy efficiency from your gas fire...

Flavel has always had a reputation as a manufacturer of excellent quality, British made gas fires and our R&D team has continued to invest in developing new technology to meet the key objective of producing gas fires that save energy and as a result, help to keep costs down.

The Flavel high efficiency range combines exceptional heat output with lower running costs compared to standard gas fires.

Conventional Flue

Glass Fronted

Our range of high efficiency conventional flue glass fronted fires have an energy efficiency of up to 86.3%. They have a glass panel across the front of the fire which radiates the heat generated from the fuel bed directly into the room. The glass panel concentrates the radiant heat so that more heat is forced into the room and less is lost through the chimney. Combined with convected heat which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, making these the most efficient conventional flue fires available.

Open Fronted

Our high efficiency conventional flue open fronted fires can reach an energy efficiency of up to 68.3%. These fires provide the look and feel of a real open fire providing both radiant and convected heat. Radiant heat is emitted from the coal effect fuel bed and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air through the gap above the canopy.

Balanced Flue

Glass Fronted

Our range of high efficiency balanced flue fires have an energy efficiency of up to 93.5%. Designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home, a balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes.

standard fires

Finesse - page 45

Windsor range - page 50-51

Standard fires can achieve a direct heat output of up to 3.1kW. However these products are not suitable for use as a primary heat source.

At the heart of your home

Fires for every home

What type of Flavel fire will suit your home best?

With one of the largest choice of styles and features in the UK, from contemporary to traditional, slimline to full depth, as well as inset and outset models for hearths and walls, there is a Flavel fire to make anywhere feel like home.

Start by browsing the different options on this page and use the guide on page 6 to help you identify which type of chimney or flue you have. On each product page you will find a key to all the options associated with each fire including controls, fire backs and fuel beds.

Rocco HE - page 8

Wall Inset

To complement a contemporary home choose a wall inset fire, otherwise known as a hole in the wall fire, which is recessed into the wall and available for all chimney and flue types.

Caress Slimline - page 49

Hearth Inset

A hearth inset fire saves space as it is recessed into the chimney breast or flue and is available in a choice of slimline or full depth fuel beds with balanced flue options for homes without a chimney or flue.

Sophia Fireplace Suite - page 14-15

Fireplace Suite

A Suite really makes a statement in a room and comes complete with the surround and gas fire suitable for conventional as well as balanced flues.

Curve - page 7

Wall Outset

This type of fire has a direct connection to the flue and is fitted on to the wall with minimal building work required. A virtually hassle-free installation, and a perfect complement to homes requiring performance and aesthetics.

Emberglow - page 34

Hearth Outset

Set onto a hearth this type of fire takes a more prominent position in a room with some models offering the option of side windows so that the flame pattern can be seen from all angles.

Thurcroft Stove - page 54

Freestanding

A freestanding stove is both portable and offers total flexibility to homeowners who want to heat a single room or boost the primary heat source when the temperature drops outside.

Before you begin

Type of Chimney or Flue

The type of chimney or flue you have dictates the type of fire you can have. But if you're not sure, then take a look at your roof and compare it with the simple guide below. It's worth remembering that a full depth fire often requires a traditional chimney or rebate on the fire surround, whilst a slimline fire will fit virtually any chimney or flue.

Brick Chimney - Class 1 Flues

Apart from products designed for "no chimney" applications, all Flavel products will fit brick chimneys. They are easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue - Class 2 Flues

Pre-fabricated flues are easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Pre-cast flues can be identified by a ridge vent or metal flue tube and terminal on the roof. Constructed from concrete or clay blocks they form a rectangular section flue. All Flavel fires featuring this icon are only suitable for Pre-Cast flues conforming to BS EN 1858.

Controls

Manual Control

A simple and discreet control system located behind the fire's trim or fret on inset fires and the bottom right side on outlets.

Semi Remote Control

Light the fire using the manual control system then use the remote control handset to adjust the flame height and heat output.

Slide Control

Convenient control that eliminates the necessity of bending down.

Electronic Flame Control

Discreet easy access buttons are used to ignite the fire and adjust heat and flame height.

Top Control

A push down and twist ignition and control located on the top of outset fires means you don't have to bend down to light the fire.

Remote Control with Thermostat

The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. In addition, the handset contains the extra benefit of a thermostatic control to regulate room temperature and a programmable timer that can be pre-programmed to ensure your room will be warm whenever you wish.

Remote Control

The remote control handset is used to light the fire as well as adjust the flame height and heat output.

Electronic Top or Side Control System

Both ignition and heat are controlled by a single rotary motion to light the fire. These easy to use controls are now available on our best selling radiant outlets. Requires an AA battery.

Can't see a Chimney or Flue?

If you can't see a chimney or flue like the ones described on the left, then you will require a Balanced Flue.

Balanced Flue

Balanced Flue fires use a horizontal pipe to vent directly outside. An electricity supply is not required for Balanced Flue products.

Gas Supply

Your gas supply will either be natural gas or LPG, depending on the area in which you live.

Natural Gas

If you have a gas meter then you will have natural gas.

LPG

LPG is the most popular alternative to natural gas.

high efficiency Conventional Flue – Wall Outset – Glass Fronted

Curve

The Curve "hang-on-the-wall" fire with its sleek lines, textured fascia and glass front, complements the unique flame pattern created by an undulating back panel. This stunning fire is easy to install as it literally hangs on the wall, rather than slotting into the structure. The Curve is perfectly suited to contemporary homes requiring state-of-the-art appearance and the performance to match.

Sophia Suite

The Flavel Sophia gas fire suite features a large, high efficiency, log effect gas fire framed by a beautifully designed Royal Botticino stone surround. The large non reflective glass front delivers an uninterrupted view of the fuel bed.

This gas fire suite is available in a conventional flue or slimline balanced flue version and is operated by a multifunctional remote control handset. The remote control system includes a thermostatic operation which automatically adjusts the heat output up or down to maintain your desired pre-set temperature. There is also a wake/sleep timer function which lets you specify when the fire will automatically turn on and turn off.

For optimum efficiency the Sophia comes with a built in electronic fan that is used to circulate convected heat around the room.

WARNING BFM Europe Limited is a Gas Safe Registered company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions, electric models by a competent person.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase.

Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information.

Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types.

We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure.

We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat.

In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.

[This brochure is copyright and must not be reproduced in whole or in any part without prior written permission].

We would like to thank Kedleston Heating (01332 200303), Olde England Reproductions (01782 319350), Stanningley Firesides (0113 257 1512) and GB Mantles (01924 473243) for contributing fire surrounds to this brochure.
